

Section 9 – Controllers

Controllers are made to suit specific applications.

The number of options is largely unlimited. However a few options come up regularly and a range of these is available. These are

Dimmer – This is the only manual controller. It comes with a manual-dimming knob. Mounted on a normal electric front panel and looks identical to a normal voltage dimmer for down lights but in this case is designed for dimming led bulbs or any other form of led lights, in cove lights or similar. It uses our propriety Frequency Modulation Technology that also extends the life of the leds. Front panel size 115 by 75mm will fit onto normal electric switch boxes - up to 6.5 amps. The output voltage will match the input voltage specify Y.

CCM-3S – This specially designed 12 volt controller works with the RGB Lotus lights, and RGB led strips.

Controllers can be made to suit just about any application.
